

Credit Name: CSE 2110 Procedura; Programming 1

Assignment Name: Add Coins Mastery Project

How has your program changed from planning to coding to now? Please explain?

During planning, I wanted to make a simple program that would calculate the total dollar amount based on the number of coins inputted. I considered having multiple methods for each coin type, but I realized it would be more efficient to have one `getDollarAmount()` method to handle all calculations at once.
